

The Goldwind has recently installed the world's first 16 MW offshore wind turbine. This remarkable engineering achievement signifies a major stride towards sustainable energy and sets a ...

The MySE 16-260 earns its largest-ever tag thanks to its rotor diameter of 260 meters (853 feet) and its swept area of 53,902 square meters (580,196 square feet); it's also the most ...

As the world's largest-capacity floating wind turbine to date, the GWH252-16-F can effectively spread the cost of floating wind development, save project sea area, reduce engineering ...

China and USA are fighting it out for the top spot in wind turbine size and scale, and it is unlikely that the new 16MW wind turbine from Ming Yang will remain the world's largest turbine for ...

China's recent initiation of 16+MW wind turbines through Goldwind, Mingyang, and CSSC Haizhuang constitutes a landmark achievement in renewable energy. The implications extend ...

At 14:30 on July 19, the world's first 16-megawatt ultra-large-capacity offshore wind turbine was successfully connected to the grid and began generating electricity at the Fujian offshore wind ...

The world's first offshore wind turbine with power generation capacity of 16 megawatts has become operational in East China's Fujian offshore wind turbine field, a breakthrough in...

The design builds on that of the world's first twin-headed turbine, a 16-MW version that is currently operating in the South China Sea, and combines the output of two turbines in one.

Chinese wind turbine maker Goldwind has installed its massive 16 megawatt (MW) offshore wind turbine in a "record-breaking" 24 hours.

The world's largest offshore wind turbine has set a new world record for electricity generation by an individual wind turbine in a 24-hour period.
