

Our approach is to present a collection of concise yet information-rich topical articles and "country vignettes" summaries, containing all key information about solar. As a result, the report can be used year-round as the ...

Welcome to the Global Solar Atlas. Start exploring solar potential by clicking on the map. Select sites, draw rectangles or polygons by clicking the respective map controls. Calculate energy production for selected sites.

The International Energy Agency works with countries around the world to shape energy policies for a secure and sustainable future.

This map use datasets from African Energy Live Data to illustrate Africa's solar power potential and principal projects. A main map is shaded according to specific photovoltaic power output, with the ...

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this document.

In 2025, 18 African countries are expected to install at least 100 MW of new solar capacity - up from just two in 2024. This means more solar will be installed in more countries, boosting the regions overall solar market to ...

Compared to the year 2000, there has been a notable increase in electricity production from renewable sources, including solar and wind, marking a strong commitment to the energy transition in Africa.

Echoing and contrasting with the opportunity presented by grid integration, isolated power systems present a hurdle for deploying solar power at scale and fully utilising Africa's solar resources.

This report, the Africa Power Transition Factbook 2024, produced by BloombergNEF and commissioned by Bloomberg Philanthropies, assesses the state of play of the renewable energy sector on the African continent.

he performance of Africa. Between 2019 and 2022, Africa was positioned among the least growing regions of the world. 2023 gave the continent a major boost, pushed by the power crisis in South Africa, and brought the ...
