

What is battery management system (BMS)?

Battery Management System (BMS) role in battery packs and energy storage system is critical to ensure safe operation and extend lifetime.

How will BMS technology change the future of battery management?

As the demand for electric vehicles (EVs), energy storage systems (ESS), and renewable energy solutions grows, BMS technology will continue evolving. The integration of AI, IoT, and smart-grid connectivity will shape the next generation of battery management systems, making them more efficient, reliable, and intelligent.

Why do lithium batteries need a BMS?

The BMS prevents your lithium battery's voltage from going too high (causing overheating and gas release) or too low (leading to permanent damage). Damage occurs if you overcharge (cell voltage gets too high) or over-discharge (cell voltage gets too low) a lithium-ion battery cell. Overcharging occurs when recharging exceeds a battery's safe range.
