

# Boost converter for solar power generation

A simple and highly efficient DC-DC Boost Converter with an Advanced Perturb and Observation (APO) MPPT control algorithm suitable for utility and medium-level power application is proposed.

This topology is ideal for high efficiency solar power generation systems to boost the output voltage of the solar panel to a consistent DC bus voltage, which can be fed into a grid-tied inverter.

The converter adjusts its output voltage to extract the maximum power from the solar panels, stepping up the panel voltage to charge batteries or supply power to the electrical grid.
