

This project, developed with Japanese and French companies, will significantly reduce the country's reliance on expensive, imported diesel for power generation and is a major component of achieving ...

The construction of the solar power plant is a key component of East Timor's strategy to diversify its energy sources. The country has been heavily reliant on fossil fuels, but this new initiative will help reduce ...

Renewable energy potential is strong in East Timor, according to the Asian Development Bank, with almost the entire territory having the potential to successfully generate solar energy. Other ...

East Timor plans to retire its diesel power plants in the 'near-to-medium term'. East Timor expects the construction of its first large solar power plant to begin in 2026 and become operational months ...

East Timor is on the path toward energy independence and rural empowerment, and solar energy is a vital tool in this journey. With strong sunlight, limited grid access, and a growing focus on clean development, the ...

Renewable energy potential is strong in East Timor, according to the ...

East Timor expects the construction of its first large solar power plant to begin in 2026 and become operational months later, the state utility's chair told Reuters, helping it slash...

Japan's Itochu Corporation and 'lectricit' de France (EDF) will jointly develop a 72 MW solar power plant and a 36 MW battery energy storage system in Manatuto. The two companies will supply power ...

The East Timor Renewable Energy Electrification Plan consists on the thorough analysis of wind, solar and hydro resources (including wind measurement stations installation).

With over 90% household electrification already achieved, East Timor plans to phase out diesel plants, incorporate natural gas-based power, and expand renewables to achieve its net-zero target by 2050.
