

The four end-use sectors also consume primary energy, and they purchase and use most of the electricity the electric power sector generates and sells. The end-use sectors also produce ...

The energy end-use consumption tables for 2003 (Detailed Tables E1-E11 and E1A-E11A) provide estimates of the amount of electricity, natural gas, fuel oil, and district heat used for ...

Energy end use refers to the final utilization of energy by consumers across various sectors, including residential, commercial, industrial, and transportation.

In all regions except the United States, fuel consumed to produce district heat is allocated to the residential, commercial, and industrial end-use sectors according to their respective share of heat ...

The EEI database contains energy and emission data by country, end-uses and product, from 2000 onwards. It covers four sectors (residential, services, industry and transport) for IEA ...

This publication includes total energy production, consumption, stocks, and trade; energy prices; overviews of petroleum, natural gas, coal, electricity, nuclear energy, renewable energy, and ...

A national sample survey that collects information on the U.S. manufacturing establishment, their energy-related building characteristics, and their energy usage and expenditures

Decomposition of energy end-use trends often distinguishes among three main components affecting energy consumption: aggregate activity, sectoral structure and energy efficiency.

Sources: U.S. Energy Information Administration (EIA), World Energy Projection System (2021), run lm\_210719.163843; and EIA, (February 2021), Notes: \* Totals may not equal sum ...

For engineers and policymakers focused on efficiency, the most meaningful measurement of energy consumption occurs at the point of use, known as end-use energy. This ...

The U.S. Energy Information Administration's (EIA) U.S. energy consumption by source and sector chart illustrates energy that is consumed (used) in the United States.

The chart below shows the types and amounts of primary energy sources consumed in the United States, the amounts of primary energy consumed by the electric power sector and the ...

use energy is the energy directly consumed by the user, as opposed to primary energy which is the energy that  
is harvested directly from natural resources. End ...

End-use sector electricity consumption does not include electrical system energy losses incurred in the generation, transmission, and distribution of electricity.
