

Executive Summary In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The projections are developed ...

The state's installed BESS capacity is on track to grow over three-fold, from 15.7 gigawatts (GW) in 2025 to a projected 52 GW by 2045, reflecting the technology's rapid deployment and increasing role in energy resilience.

EIA data reviewed by the SUN DAY Campaign confirms the storage sector surge experienced throughout 2024, where battery capacity increased 66 percent in the calendar year, has continued deep...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 when power ...

The American Clean Power Association reported that the United States added a record 1,602-MW of battery storage capacity in the first quarter of 2025, equivalent to the energy generation capacity of ...

Battery energy storage systems (BESS) go beyond 100 GW in a year The 2025 report notes that BESS deployments increased by 104 GW / 257 GWh, for a global capacity of 267 GW / 610 GWh, breaking ...

The Electric Reliability Council of Texas took over as the US region with the most operating battery storage capacity, adding 51.5% of the 6.239 GW installed across the US in second-quarter 2025.

BloombergNEF (BNEF) forecasts that developers will add 94 gigawatts (247 gigawatt-hours) of battery capacity this year, a 35% increase over 2024 and the highest annual total to date (excluding pumped ...

According to the Q4 2025 US Energy Storage Monitor from Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP), 2025 energy storage installations surpassed ...
