

# Energy storage project developed in Tampere Finland

Finland is turning one of the planet's most ordinary materials into a high impact climate tool, using hot sand to store vast amounts of energy and release it as heat when homes and factories ...

Based in Tampere, Polar Night Energy Oy has developed a sand-based thermal energy storage system that efficiently stores heat generated from renewable energy while minimizing costs. ...

Polar Night Energy's 3 MWh test pilot project in Hiedanranta, Tampere, represented a significant step in thermal energy storage technology. The pilot allowed for testing, validation, and optimization of our ...

Explore the Tampere project from Ren-Gas, an e-Fuel initiative that converts captured CO2 into sustainable synthetic fuels, supporting cleaner energy and transport solutions.

Finland's sand battery offers 10x more heat transfer efficiency, cuts energy bills by 70% The architecture of the new technology supports high vertical and horizontal scalability.

TAMPERE, Finland, July 03, 2025 (GLOBE NEWSWIRE) -- The energy storage facility delivered by Merus Power to Lappeenranta, Finland, has been completed and put into market use on 15 May 2025.

As Finland accelerates its transition to renewable energy, the energy storage project in Tampere stands out as a critical infrastructure development. This tender aims to address grid stability challenges ...

The EU funded ARMS-project aims to enhance the energy density of supercapacitors, devices used for energy storage, without sacrificing their eco-friendliness. The project strives to ...

Taaleri Energia and Merus Power have partnered to deploy a 30MW/36MWh battery energy storage system in Finland, one of the country's largest.

To validate and refine the process, Polar Night Energy is developing a pilot plant to be built in 2025 near Tampere, Finland. This pilot will focus on optimizing thermal storage and the efficient ...
