

This invention relates to wind power energy and, more particularly, to foldable turbine blades for simplified transportation in construction of wind towers and reduction of stress loads on...

Vela 9 is a compact, foldable, and lightweight wind turbine with a focus on rapid set up without requiring tools. The final design is a 20W turbine that can be dismantled into a foldable umbrella structure and a compact ...

Shine 2.0 is operational between wind speeds of 8 and 28 miles per hour, functioning between temperatures of 32 and 104°F. With a six-foot mount accessory, the turbine can stand over most common ...

Folding Power Generation Blades: The Future of Portable Renewable Energy? Imagine trying to fold a wind turbine into your backpack for a weekend camping trip. Sounds like sci-fi? Welcome to the wild world of ...

The world's first portable wind turbine that has all the functionality of a large wind turbine, scaled down to fit in your backpack. With Shine you can generate power anytime, anywhere the wind blows.

Key components are the blades, which can be quite large. In this project, I implemented a somewhat crazy idea, but it works! Folding blades with a hinge mechanism make the whole assembly more compact.

At dangerous wind speeds, like tropical storms or hurricanes, the blades are made to align with the wind direction, reducing the risk of damage. It may be possible that they could continue to spin like an ...

The cost-effectiveness and convenient fabrication of the folded flat-plate blade make it suitable for emergency applications, such as disaster relief. For example, quickly fabricated wind turbines can provide ...

The Jackery AIR-W is a foldable, small and portable wind turbine attachment you can use for your outdoor activities. The product enables multi-unit parallel output, which allows it to be used in more ...

Discover the Modular Wind Turbine project from Sep-Dec 2024 at the University of Southern Denmark, featuring a foldable blade design for easier transport and rapid on-site assembly.
