

Few projects better exemplify that than the Minamisoma Mano-Migita-Ebi solar power plant, which was the largest in Fukushima Prefecture until 2019 and is made up of 220,000 solar panels...

In 2018, Sumitomo Corporation constructed the largest solar power plant in Fukushima in the Tsunami affected area of Minamisoma, with a rated output of 92 megawatts, enough to power ...

KUSHIRO, Hokkaido/FUKUSHIMA -- Large-scale solar power generation plants, known as mega solar power plants, are leading to conflict between local residents and businesses, and local...

Glare reflects off photovoltaic panels at a mega solar farm in Fukushima city. (From the website of the Mount Sendatsuyama monitoring group)

Located in Matsukawa-cho, the Fukushima Solar Farm repurposes a 60-hectares disused golf course at the outskirts of the prefecture. The project will have more than 63,000 solar panels installed and a ...

On September 12, the Fukushima City released a "No More Mega Solar" Declaration. The announcement came in response to the ongoing construction of mega solar power plants that ...

"Solar Power Plant in Fukushima" - As a global organization that operates wind and solar farms around the world, Eurus Energy Group works with communities to develop optimal solutions and ...

When an earthquake and resulting tsunami hit the Fukushima Daiichi Nuclear Power Plant in 2011, damaged reactors released radioactive material into the surrounding area, rendering ...

Government and industry financiers are pursuing plans to develop 11 solar farms and 10 wind farms on abandoned or contaminated land around Fukushima, according to news reports.

With costs estimated at more than \$2.75 billion, the new plants will supply electricity to the Tokyo metropolitan area, connecting to the city's power network through a still-to-be-constructed ...
