

Home with separate outdoor power supply

How do you run power outdoors?

Mr. Electric outlines the safest methods for running power outdoors. Plan your route and power needs. Use weatherproof, outdoor-rated conduit and wiring. Dig trenches for underground cables, following local codes. Install GFCI outlets for safety. Test the system before use. Test the system before use. Looking to 'amp up' your outdoor experience?

Do I need a permanent power solution?

For lighting, lawn tools used on the regular, or outbuilding power needs, you need a permanent power solution for safety, whether that involve an outdoor outlet addition to your home's main structure, or wiring run remotely to an outbuilding. For lines not off the house, cable must be wired to a separate GFCI indoors.

How do I supply electricity to a garden building?

To provide electricity to an outdoor building, such as a shed, garden office or summer house, you must run an armoured cable from your main house supply to the external building. Ideally, this cable should be buried underground (usually 600mm deep) and connected to a new consumer unit installed in the garden building.

Is solar power a good option for a remote outbuilding?

Solar power is ideal for remote outbuildings far from electrical service. Consider solar if trenching is difficult or expensive, or if you want energy independence. You'll need properly positioned solar panels, battery storage, and power management systems sized to your specific needs.
