

How to raise geese under the national photovoltaic panels

Co-located agriculture and PV can incorporate crop production, pollinator habitat, or livestock grazing beneath solar panels, providing benefits to both the agriculture and solar energy industries.

One of the most innovative solutions to emerge is solar grazing--the use of livestock, particularly sheep, to manage vegetation around solar arrays. This practice not only keeps grass and ...

Now, with growing demand for clean energy but a paucity of empty land, researchers are exploring how to grow crops under raised solar panels (photovoltaics) instead of trees.
