

We proposed a hybrid energy harvesting system that can collect energy from RF and solar energies at the same time.

Considering these issues, this thesis aims at developing a sustainable and environment-friendly cellular infrastructure using the locally available RES like hybrid solar photovoltaic ...

Discover how hybrid energy systems, combining solar, wind, and battery storage, are transforming telecom base station power, reducing costs, and boosting sustainability.

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for both ...

A joint load control based on energy sharing and dynamic on/off switching of a small base station is investigated in to reduce the grid power and efficiently utilize the renewable energy ...

To address this challenge, the present study develops a comprehensive mathematical modeling framework for bio-hybrid base stations powered by synthetic biology, with emphasis on ...

In this work, we analyze the energy and cost savings for a defined energy management strategy of a RE hybrid system. Our study of the relationship between cost savings and percentage of sites equipped ...

As we develop self-tuning capacitor banks for high-altitude base stations in the Andes, one truth becomes clear: The future of telecom power isn't about choosing between energy sources, but ...

Base stations, especially in remote or off-grid areas, increasingly utilize hybrid systems combining ESS with renewable sources like solar PV or small wind turbines.

In this article, we propose a joint user association and SBSs configuration scheme for maximizing energy efficiency (EE) in hybrid-energy HCNs.
