

In Latvian conditions cooling is required about 5000 degree hours per year (at an indoor temperature of 21 °C), but the importance of outdoor air relative humidity ranging from 70-90%.

Latvian islands and solar air conditioning The national priority axis is increase of RES use in Latvian Energy sector, so new solutions for Electricity, Heat and Cool production are searching for.

Latvian islands and solar air conditioning Small Scale Solar Cooling Unit in Climate Conditions of Latvia Jan 1, 2010; In this paper, a brief overview of different available and actually ...

SunContainer Innovations - When considering solar air conditioning in Latvia, the first question is: Does this Northern European country get enough sunlight? While Latvia averages just 1,700 annual ...

Abstract There are many well known researches and commercial products for solar air-conditioning (SAC) units of small and medium power (up to 100 kW). Solar energy application for refrigeration by ...

The national priority axis is increase of RES use in Latvian Energy sector, so new solutions for Electricity, Heat and Cool production are searching for. In Latvian conditions cooling is required ...

Scoring System This country profile highlights the good and the bad policies and practices of solar rooftop PV development within Latvia. It examines and scores six key areas: ...

Promoting the energy efficiency and RES use in DHS networks is a major step for performing Latvia's national climate and energy goals and for transition to 4GDH. Many projects ...

Compared with the traditional compressor-based air conditioner, the solar cooling system can save up to 80% electric energy when providing the same cooling capacity for office buildings.

Conclusion While solar air conditioning in Latvia isn't a one-size-fits-all solution, it's becoming increasingly practical through technological advances and policy support. For properties ...
