

The TIGON project is demonstrating hybrid microgrid innovations for greener, more resilient and more secure power networks. In Finland, the project focuses on the replication site in Naantali.

Here are seven ways in which microgrids can help deliver the clean and reliable energy we need in the future.

Will zero-carbon microgrid be a future power system? Also, few papers have discussed the trends, challenges, and future research prospects for developing the zero-carbon microgrid, an important form of the future power ...

The share of renewable energy sources is growing rapidly in Finland. The growth has been boosted by wind power during the last decade. Based on the pr...

LUT is Finland's major center for energy R&D The Laboratory of Electricity Markets and Power Systems (LEMPS) is dedicated to research excellence in a variety of energy topics

We simulate your entire microgrid project using virtually integrated control modules to define the optimal microgrid design for your needs. What's more, we evaluate the baseline and solution benefits that ...

The direct economic benefits of microgrids result from improving overall energy efficiency by reducing primary energy consumption and by aligning consumption better with availability of zero ...

It has been rewarding to study smart grid technology in Finland because of their commitment to environmental responsibility. Finland invests in key projects like the Marjam&#228;ki ...

Boost efficiency with Solar PPA and microgrid solutions. Zero upfront cost, reliable storage, and smarter energy for commercial businesses in Finland.

However, despite their many benefits, the implementation of microgrids is not without challenges. In this article, we will explore some of the key challenges facing microgrids, as well as the opportunities for ...
