

This study explores the next generation of cost-effective and high-performance battery systems and discovers near-future battery technologies, including sodium-ion chemistry and rare ...

The system reduces the incident energy with low arc energy and protects the safety of maintenance personnel with a lower class of required PPE by limiting exposure to high voltages and ...

DNV's fifth Battery Scorecard presents findings from tests conducted on dozens of battery cells, offering insights into new technologies, degradation, useful life, and safety.

Based on the policies implemented by the government in recent years that promote the development of the NEV battery industry, this paper summarizes the achievements while analysing ...

Utilizing an industry-leading and diverse technological approach and full-stack self-development capabilities to address concerns such as safety, performance, and supply anxieties, creating a ...

The New Energy Vehicle Liquid Cooled Battery Pack Market was valued at USD 20.57 billion in 2025 and is projected to grow to USD 22.86 billion in 2026, with a CAGR of 12.45%, ...

This paper provides an initial projection of future battery specific energy performance based on historical rates of progress and maximum specific energy limits for some select chemistries.

Battery makers are combining graphite (natural or synthetic) with silicon blends to increase energy density and charging performance without compromising durability and lifespan.

Battery pack is a key component of electric vehicles (EVs) because it operates as the main power supply. Despite recent advancements, more improvements are needed to achieve ...

We specialize in custom lithium-ion designs and offer assemblies in all other chemistries. Aerospace & Defense batteries and battery packs are used for a variety of critical military applications ranging ...
