

At SolarDuck, we are building on our Dutch-Norwegian roots and pioneering the future of renewable energy by harnessing the power of offshore floating solar technology.

"The Netherlands is a frontrunner in offshore solar energy. Thanks to its unique combination of maritime expertise, innovative strength, and public-private partnerships, Dutch ...

The world's first offshore floating solar project, a 0.5 MW array within the Hollandse Kust Noord wind farm off the Dutch coast, is running without public subsidies despite setbacks from...

The Platform Offshore Solar (POS) was officially launched on 1 January 2023. For now, the platform consists of a core group of Dutch companies whose ambition is the development and roll ...

Oceans of Energy connects floating solar power to the Hollandse Kust Noord wind farm with anchoring and marine cabling for continuous production.

The Port of Amsterdam has received the first floating solar units for an offshore solar farm. These solar units will soon integrate with existing wind farms, forming one of the world's largest ...

The Netherlands is launching the first offshore solar farm that works with wind. It will be tested and could mark a major step in clean energy.

Oceans of Energy, a Dutch renewable energy pioneer, realised that adding offshore solar panels to sea areas already used by wind farms could increase total energy production up to fivefold ...

It is planned that the system will be installed at the OranjeWind wind farm off the west coast of the Netherlands. Extensive research and testing will confirm the reliability, survivability, ...

Three project consortia - involving technology developers Oceans of Energy and SolarDuck - have been selected to receive EUR100,000 each to further advance offshore floating solar ...
