

DIAMON-FUSION™ is a patented solar panel coating that works by forming a protective film over the panels' surface. This film not only wards off debris but also improves the panels' water ...

To effectively eliminate the oil residue that accumulates on solar panels, several strategic methods can be employed. 1. Regular Maintenance, 2. Appropriate Cleaning Agents, 3. Pressure ...

A solar panel nano coating is a specialized, ultra-thin layer applied to the surface of solar panels. It enhances the panel's performance by providing properties such as hydrophobicity (water ...

The treatment process improves hydrophobicity while maintaining mechanical strength, enabling long-term performance in harsh outdoor environments. The film's thickness can range from ...

Ever noticed that weird rainbow sheen on your photovoltaic panels that makes them look like they've been working part-time at a burger joint? That's oil film contamination, and yes, it can absolutely be ...

Photovoltaic (PV) power generation is a clean energy source, and the accumulation of ash on the surface of PV panels can lead to power loss. For polycrystalline PV panels, self-cleaning ...

This technique is done by coating the front surface of the PV panel by a fine layer of oil in order to increase the amount of light transmitted to the panel, and consequently its efficiency.

This validates our success in developing a photothermal, transparent, and superhydrophobic coating with excellent anti-icing capabilities, suitable for use on photovoltaic ...

Nasiol SolarCoat FC is a hydrophobic and oleophobic nano coating developed to protect and boost the performance of your solar panels. It creates an ultra-thin invisible barrier that repels water, oil, dust, ...

In this study, we introduce oil-repelling surfaces capable of self-cleaning in any orientation to address oily dust contamination. The proposed surface features a disconnected grid ...
