

With 14 years' experience in African energy projects, we've deployed over 800 storage systems for telecom operators. Our modular designs adapt to any site configuration.

The report found that by deploying 60-70MW (160-220MWh) of independent battery energy storage solutions (i-BESS) the energy sector could potentially save between 800 million and 1.8 billion FCFA (\$1.5 million to ...

In June 2023, construction began on a 20MW/80MWh battery energy storage system (BESS) near the Gounghin Reservoir. This installation's not your grandma's power bank - it uses modular LiFePO4 batteries ...

The goal of this study is to create an on-grid hybrid power system using PV and hydro pumped storage systems to enhance energy production of Mosul Dam Pumped Storage Power Plant ...

Ouagadougou has invited international bidders to submit prequalification documents for two greenfield, solar storage projects, backed by funding from the World Bank Group and the Clean Technology ...

Recovering compression waste heat using latent thermal energy storage (LTES) is a promising method to enhance the round-trip efficiency of compressed air energy storage (CAES) systems.

With the development of energy storage (ES) technology and sharing economy, the integration of shared energy storage (SES) station in multiple electric-thermal hybrid energy hubs (EHs) has ...

Since 2022, Bairen Energy Storage has deployed 47 battery energy storage systems (BESS) across West Africa. Their Ouagadougou flagship project--a 20MW/80MWh lithium-ion facility--powers 15,000 homes ...

The Ouagadougou Valley Power Storage Project isn't just another infrastructure initiative - it's a game-changer for renewable energy storage. In a continent where 600 million people still lack reliable ...

BESS can act as a reliable backup power source during grid outages. The stored energy in the batteries is readily available to power critical telecom equipment, ensuring uninterrupted communication services for ...
