

How do I choose the best solar generators?

To pick the best solar generators, we tested some of these power stations for charging capacity, ease of use, weight, and different use cases. Some picks were reviewed by Popular Mechanics test editor Brad Ford, who provided input for the larger-capacity units.

Should you buy a solar generator?

Power stations are often heavy, and solar panels can be unwieldy. Purchasing a larger unit than is necessary for your needs can reduce the utility of your overall setup -- after all, if you hesitate to pull out your solar generator because of what a pain it is to set up, then it's not doing you much good after all.

Are solar generators a good investment?

Solar generators can be a pricey investment. Before you start looking at the various power stations and solar panels and package deals available, it's important to know how much you are willing to spend. Underspending on a power station can result in inadequate power needs in the case of a power outage or while adventuring off grid.

How much Solar do you need for a solar generator?

He suggests that people use the "rule of five" when determining how much solar they will need for their solar generator. For instance, if you're purchasing a 4,000 watt hour power station, you'll need 800 watts of solar to charge it up during the day. If it's a 2,000 watt hour power station, you'll need 400 watts of solar.
