

After the completion and commissioning of the project, the annual net power can reach 3.65 billion degrees, which will realise the scientific and technological innovation and demonstration application ...

The solid-state film proposed in this study effectively addresses the issues of poor thermal stability and leakage associated with liquid-based systems while remaining fully compatible with existing PV ...

Developing high-efficiency solar photothermal conversion and storage (SPCS) technology is significant in solving the imbalance between the supply and demand of solar energy utilization in time and ...

Photothermal phase change energy storage materials show immense potential in the fields of solar energy and thermal management, particularly in addressing the intermittency issues of solar power.

Photothermal phase change energy storage materials (PTPCESMs), as a special type of PCM, can store energy and respond to changes in illumination, enhancing the efficiency of energy systems and ...

Photovoltaic/thermal collectors are classified into three main types: air-cooled, liquid-cooled, and heat pipe. The advantages and disadvantages of different collectors and applicable scenarios are analyzed.

Overall, this study provides a very useful information about the thermal behavior, selection and the possible use of different phase change materials in solar energy systems, round ...

The present invention provides an energy storage type high-temperature photovoltaic and photothermal integrated power generation system and method.

In this study, we prepared CNT-BN-SA-1, a photothermal phase change energy storage material with excellent stability, long life, and high enthalpy value. The Hm of CNT-BN-SA-1 is  $143.5 \pm 5.0 \text{ J g}^{-1}$ , ...

These materials, utilizing various photothermal conversion carriers, can passively store energy and respond to changes in light exposure, thereby enhancing the efficiency of ...
