

What is a PV meter?

A PV meter, or photovoltaic meter, is a device used to measure the performance of solar panels. It provides data on solar irradiance, voltage, and current, helping to ensure that the solar power system operates efficiently.

What is a solar panel meter?

A solar panel meter is a device used to measure the amount of solar energy received by a solar panel. It provides essential data to ensure the solar panel is positioned correctly and operates efficiently.

What is a UT673PV solar MPPT meter?

UT673PV solar MPPT meter can effectively identify any abnormalities in solar panels by testing their maximum power, peak power voltage, peak power current, open circuit voltage, and short circuit current. Featuring a spacious screen and automatic measurement capabilities, this device conveniently displays all measurement results simultaneously.

What type of meter do I need for solar power?

The type of meter you need for solar power will depend on your specific needs. For grid-tied solar systems, a bi-directional utility meter is required to track the electricity being transferred to the grid. On the other hand, a PV meter is used to measure how much electricity your solar system generates.

In this guide, we'll explore how to choose the best PV system measurement instruments to match modern high-voltage requirements -- especially as 1500V DC systems become the new standard.
