

Since 2000, flexible support photovoltaic module structure systems have been widely used because of their advantages such as short construction period, large span, good economic ...

Fixed supports (rigid structures) and flexible supports (tensioned cable systems) are two main methods used in constructing photovoltaic power plants, and their construction technology has ...

In this study, a universal mathematical model is established for the power generation by photovoltaic (PV) modules in which both the sea conditions and the ship's integrated motion, including...

Offshore floating photovoltaic systems and other offshore photovoltaic systems are developing rapidly, and the impact of waves on offshore photovoltaics has become an ...

When designing flexible photovoltaic supports, the requirements of structural stability, weather resistance, lightweight and strength must be comprehensively considered to ensure the long ...

By means of the present method, flexible support for modules in a photovoltaic power generation system with an ultra-large span greater than 100 meters can be realized, filling the gap in ...

In recent years, a flexible photovoltaic support, which uses prestressed cables to fix and support the photovoltaic module and which transmits the upper load to the foundation through a substructure on ...

The flexible PV support structure, serving as an efficient and flexible solar power generation support system, mainly consists of five key components: horizontal force-bearing ...

The invention relates to the technical field of solar energy application, in particular to an arch-supported flexible photovoltaic support structure.

In this paper, we mainly consider the parametric analysis of the disturbance of the flexible photovoltaic (PV) support structure under two kinds of wind loads, namely, mean ...
