

How useful is the 220V AC socket in the Prado 150?

Thread: 220V AC socket in the Prado 150 - how useful is it? 220V AC socket in the Prado 150 - how useful is it? It's a 220V AC socket that is rated for 100W.. and it seems like its not particularly useful. Supply obviously comes from the vehicles single battery, and it only gets power when the vehicle is running.

Is there a 12V DC socket in my Prado?

Most gear like tire air compressors or camping fridges run on 12V in any rate, yet there is no 12V DC socket in the back of this Prado that I can find. Also a 12V socket would have been better as I suppose there are less losses than converting the 12V to 220V.

How much power does an inverter need to run a fridge?

If $100\text{watts}/220\text{v} = 0.45\text{Amps}$, then the power cable from the inverter to battery has to be rated to draw 100watts of 12V which is 8.3Amps, most cars have a 10Amp 12V 120watt plug, which while the engine is running should supply enough current to power the fridge, if the inverter is running off a dual battery this would *almost* be enough to do it.

Is a 12v socket better than a 220V?

Also a 12V socket would have been better as I suppose there are less losses than converting the 12V to 220V. Obviously one can fit a second battery somewhere and re-wire.. or even replace it with a 12V socket and strip out the little inverter (or just get a battery box system/ecoflow or whatever), but in its stock form what do you guys use it for?
