

Can a smart microgrid shave a power grid?

This paper elaborates on the proposed renewable integrated smart Micro (or) nano grid for peak shaving of the power grid. The primary source of the smart microgrid is solar photovoltaic-powered vehicle-to-grid (V2 G) energy storage technology and biomass energy conversion.

What is a pollution-free smart microgrid?

The proposed pollution-free smart microgrid model aims to attain the status of the smart village. The various technological topologies like domestic household to the grid, the community charging station with renewable energy sources, and V2 G for grid peak shaving are designed to optimize the EV's stored energy.

Are standalone hybrid renewable microgrids feasible?

Recent studies on optimal design feasibility of standalone hybrid renewable microgrids. Abbreviations: BESA (Blade eagle search algorithm); OPEC (Operating cost); DA (Division algorithm); SCOW (Specific cost of the water). From the aforementioned literature survey, the main observations and research gaps can be summarised as follows:
