

What is a Grade B solar panel?

Grade B solar panels have visual defects but meet performance specifications. These solar panels are less common than grade A solar panels but are typically available from manufacturers upon request. Most manufacturers keep these panels for testing purposes but sell them with warranties like grade A solar panels.

Do you sell grade B solar panels?

A's are typically the most advertised and sold. However, some do sell grade B solar panels upon request. Most factories keep grade B solar panels for testing as they can't be sold at the same price as grade A panels but perform the same. However, overflow grade B panels are sold to the public.

Do grade B solar panels affect performance?

Grade B solar panels have some visual defects that do not affect performance. Grade B naturally falls below grade A in this grading system. So how does Grade B stack up against the other grades? Grade A solar panels are entirely free of defects. Grade B has some visual flaws but still meets performance standards.

How many grades of solar panels are there?

There are four grades of solar panels, but only three of them are usable. Some manufacturers may expand upon this with pluses and minuses to show how individual solar panels rank, but this is rare.
