

Developed by the Bhutan Energy Research and Development Center (BERDC) with support from the International Solar Alliance (ISA), the roadmap focuses on deploying large-scale ...

It is based on the analysis of a pilot project covering 361 households in rural areas of Bhutan. A mix of qualitative and quantitative methods is applied, which captures the multi-disciplinary ...

Feed-in-tariff study in Bhutan analyzes rural solar PV systems, highlighting financial and user acceptability factors. More details on the research here.

This study analyses the prospects of a feed-in-tariff program for solar PV systems in Bhutan. It is based on the analysis of a pilot project covering 361 households in rural areas of...

Explore the potential of rooftop solar PV in Thimphu, Bhutan. This study shows solar energy as an RE alternatives to hydro electricity.

Two pilot projects, each with 180 MW capacity, have already demonstrated solar's potential, particularly during winter when hydropower output drops. A core feature of Bhutan's strategy is linking solar ...

With monsoon fluctuations affecting hydroelectric output, Bhutan is now promoting solar mini-grids in sun-rich rural zones. Residents have received training on maintenance, and schools in ...

Bhutan's unique geography presents both opportunities and challenges for solar energy deployment, particularly in off-grid rural electrification and backup energy for remote villages.

The project included the installation of Rooftop Solar PV at Centenary Farmer's Market (CFM) and Ground Mounted Solar Panels at Dechencholing in Thimphu. The first phase of the ...

With rising temperatures and erratic rainfall threatening its energy lifeline, Bhutan is quietly investing in solar power as a resilient alternative to secure its future.
