

We explore the integration of solar and hydropower systems in the context of Brazil's renewable energy hybridization and discuss the challenges of their stochastic nature on power grid integration.

This paper proposes a seven-level inverter for a solar power generation system. The new solar power generation system is composed of a dc/dc power converter and a new seven-level inverter.

Forecasting solar power production accurately is critical for effectively planning and managing renewable energy systems. This paper introduces and investigates novel hybrid deep learning models for ...

4-E analysis and multiple objective optimizations of a novel solar-powered cogeneration energy system for the simultaneous production of electrical power and heating

Michael Thompson, an expert in solar energy and RV systems, shares actionable insights for off-grid solar installations, making energy independence accessible.

This paper proposes a renewable intelligent grid model to sustain solar power generation. The model incorporates a boost converter to optimize the performance of solar panels by converting the DC ...

This research proposes a novel AI-enhanced hybrid solar energy framework integrating spatio-temporal forecasting, adaptive control, and decentralized energy trading.

In the current study, a novel trigeneration system was presented to utilize the SPT for combined power generation, heating, and cooling. The trigeneration system consists a helium Brayton cycle and ...

Recently, Khan et al. (2024b) proposed a novel combined HBC-ORC system to generate power from an SPT system. They analyzed that system on the basis of thermodynamic analysis along with ...

To address the challenges posed by the intermittency and volatility of solar energy, a novel integration system including solar power tower, supercritical carbon dioxide recompression Brayton cycle ...
