

Testing the Phase Change Energy Storage System

Such arrangement of PCM and HTF in the TES system is termed a cylindrical model, and the one opposite to the cylindrical model is called a pipe model. This work conducts the ...

In FY25, the project will build a test apparatus to study various aspects of the charging, discharging, and cycling processes for thermal energy storage.

In order to enhance the rate of heat transfer in latent heat storage units, heat transfer structures have been developed and tested at DLR. Various fin designs have been analyzed and tested. To analyze ...

Comparison of thermal energy storage materials in building air conditioning (Ali et al., 2024).

Abstract: Thermal energy storage (TES) technology relies on phase change materials (PCMs) to provide high-quality, high-energy density heat storage. However, their cost, poor structural performance, and ...

Experiments have been completed at the National Bureau of Standards in which a 7 m³ (250 ft³) pebble-bed and a similarly-sized 264 MJ (250,000 Btu) phase-change unit utilizing sodium sulfate ...

This project aims to develop an advanced control system for phase change material based thermal energy storage (PCM-TES) for water heating applications in buildings.

This study designed a high-performance shell-and-tube phase-change thermal storage device and established a numerical model using ANSYS software to summarize the device's ...

This article designs a high-altitude border guard post that can fully utilize the heat absorbed by solar collectors to continuously store thermal energy during the day and stably release ...

A systematic experimental procedure was carried out to evaluate the thermal performance of the phase change material (PCM)-based thermal energy storage (TES) system.
