

The railway line is covered with photovoltaic panels

Swiss startup Sun-Ways has launched the world's first removable solar power plant on active railway tracks, with passenger trains set to run over the 18 kW installation starting April 28.

With 5,000 kilometers of rail track in Switzerland, the potential is immense, enabling the installation of almost 2.5 million panels. This project could revolutionize the world's rail energy ...

A Swiss startup has achieved a groundbreaking milestone by launching the world's first photovoltaic solar plant on railway tracks, promising to revolutionize renewable energy integration in ...

Projects in Germany, Italy, France and Japan are testing solar panels between the rails. However, the Swiss start-up is the first to have designed a removable system that can be placed on...

After long delays, the removable PV system will finally be tested on a western track next spring. Solar panels are set to be rolled out "like carpet" on railway tracks in Switzerland in a...

In what is being described as the world's first track-mounted solar array designed for active rail traffic, a Swiss company called Sun-Ways commissioned a removable solar installation on ...

Sun-ways is looking to tap into the estimated 1-TWh annual energy potential from the 5,000-km of railroad tracks in Switzerland by laying removable PV panels between them.

Switzerland is developing a pilot project to install solar panels between railway tracks in the canton of Neuchâtel. The removable photovoltaic system will produce energy for the local grid, ...

In Switzerland, a solar technology startup is making use of open spaces between railway tracks to place solar panels. The panels can collect solar power, even with trains using the railway ...

The integration of solar panels along railway lines maximizes land use efficiency, utilizing otherwise unused space. This dual-purpose approach to infrastructure delivers value beyond ...

The railway line is covered with photovoltaic panels
